RESET/PWDN Pin

This pin must be high in normal operation. If it is desired to completely power down the device, or to have a hardware reset control, then connect this pin to a controller. If these functions are not needed, tie the pin high. (Note that the device can both be reset and SLEEP mode engaged by commands.)

START Pin

If it is desired to control conversions by pin, connect this line to the controller. Otherwise, this line can be tied high to free-run conversions. The conversions can also be controlled by software commands. In this case, tie the START pin low.

DRDY Pin

DRDY is an output that indicates when data are ready for readback. Note that the DOUT pin (and also the DRDY register bit) indicates when data are ready as well, so DRDY connection to a controller is optional.
